

EMISSIONS ELIMINATION PROGRAM

Supporting your sustainability goals

1 Detect & mitigate emission sources

2 Reduce your environmental footprint

3 Manage your data in one location

Current Industry Challenges

Compliance

With regulations and standards

Mitigation

To achieve environmental targets

Data

To improve emissions management

Our partnership

The Emissions Elimination Program is a comprehensive solution designed to reduce operators' environmental footprint through the detection and mitigation of emissions.

Drawing on four decades of Score's emissions elimination experience combined with asset55's groundbreaking Operate software, the program aims to ensure regulatory compliance, mitigate failures, and optimise production output while providing intuitive reporting dashboards to monitor asset performance and repairs throughout the asset life cycle.

**Emission sources
we target**

Fugitive

Flares &
Vents

Other
systems

Non
Fugitive

How does it work?

Build asset inventory

Host all relevant information

Integrate with CMMS systems

Including CMMS / DCS / SAP

Select compliance requirements

Inherent regulations & frameworks

Survey

Workpack

Generate within software / dashboard

Site survey

Detect, quantify, collect data

Update

All data into software platform

Analyze

Digital report

Client login to view dashboards & reports

Review stage

View online dashboards & 3D models

Agree mitigation

Plan maintenance, build in recommendations

Eliminate

Work pack

Generate within software / dashboard

Maintenance

Execute the agreed follow-up activities

Update

Update software platform, reduce emissions

Improve

Analytics

Understanding data, component journey

Prevention

Trending failures, making improvements

Optimization

Increasing production output

Supporting  **GMP**
Oil And Gas Methane Partnership 2.0

& all other reporting frameworks

Analyze current strategy

Develop emissions inventory

Top down / bottoms up surveys

Reconcile site & source level results

Submit report

Enhanced data management

Monitor your environmental performance & track maintenance activities

- Customizable dashboards
- Project current & future losses
- Accurately report methane emissions
- Generate annual compliance reports
- Input all emissions data (inc. own / 3rd party)
- Analyze & visualize data
