

Solutions today that shape tomorrow's world

Your global partner for rotating equipment
services and maintenance.

Our Energy Transition Solutions

Bridging the energy transition gap and decarbonizing operations.

Our comprehensive suite of energy transition solutions are designed to keep your operation viable and compliant, while driving decarbonization, and energizing performance.

Life extension

Proven and reliable end-of-life solutions that meet or exceed the original equipment manufacturer and extend the life of your rotor.

EcoView™

Our Life Cycle Assessment gives you the visibility to make informed equipment choices and fully understand your environmental impact.

ECOMAX®

Automated and fully customizable combustion tuning platform. Our patented technology optimizes operating objectives.

Performance center

Our Performance Centre provides advanced real-time remote operations, asset monitoring, diagnostics and 24/7 on-demand support.

ECO transformers

Bespoke environmentally friendly power transformers utilize an innovative eco-design and biodegradable insulating liquids.

Hydrogen

Available, clean and safe renewable source of energy, our advanced technology and extensive expertise supports green and blue hydrogen energy infrastructure.

LNG

Optimize LNG plant performance with reliable and cost-effective solutions for enhanced availability across global operations.

Energy from waste

Our tailored solutions and services enable plants to maximize turbine performance and minimize outage and provide the potential for sustainable power.

Geothermal

Enhancing geothermal fields with customized, engineered solutions, and upgrades that improve steam turbine efficiency and reliability for future operating conditions

EthosEnergy's Full Portfolio

Our services

We provide a full range of independent and OEM approved solutions for your turbine, generator and transformer products and services that are specific to the oil and gas industry.

Gas turbines

Full-service provider offering gas turbine solutions across a range of OEMs.

Steam turbines

Industry-leading engineered solutions and turnkey support to increase reliability and efficiency.

Generators

Services include manufacturing of stators and rotors to generator winding kits.

Compressors

Inspect, repair, reverse-engineer and re-build centrifugal, axial and integrally geared compressors.

Transformers

Design and manufacture new grid transformers, autotransformers, and generator step-up (GSU)..

Field services

24/7 turbomachinery field services, rapid mobilization and industry leading safety performance

Operations and maintenance

Comprehensive third-party facility operations and maintenance service for power plants.

Supporting services

Steel construction, oilfield services and material handling in select geographical locations.
