XAMIN Emissions

Digital ERAP Module

A secure and fully auditable web-based solution, to store, evaluate and manage emissions reduction opportunities and plans. Developed by our world leading Emissions & Climate team to accurately meet Emission Reduction Action Plan (ERAP) reporting requirements in the UK and applicable to emissions reduction planning globally.

Compliance Efficiency

Regularly updated to meet the latest compliance requirements and to address operator feedback. Standardised inputs alongside automated calculations, visualisation outputs and export reporting, all reduce the time burden for compliance

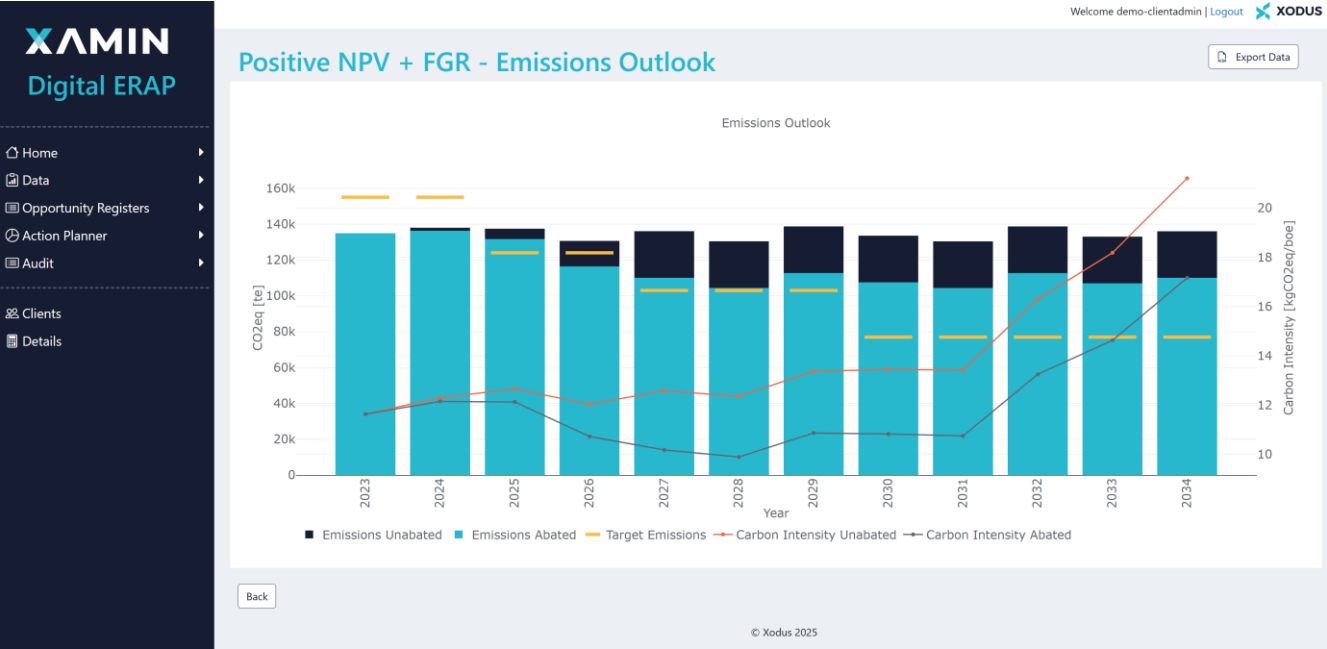

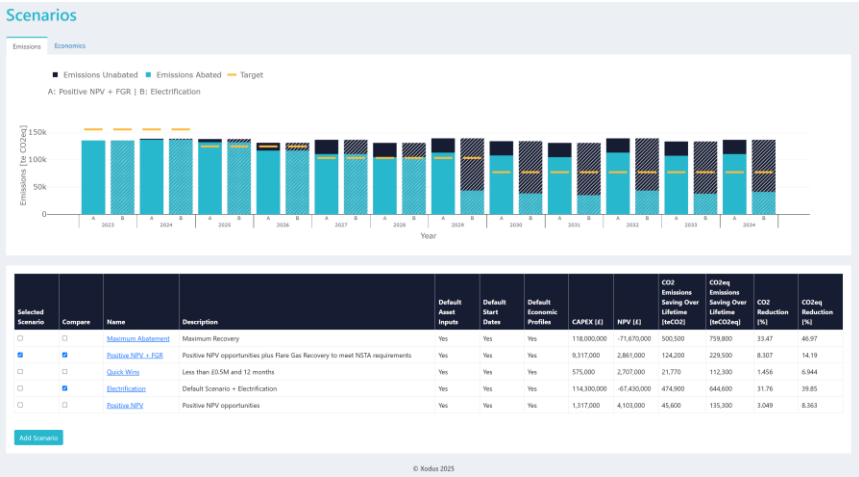

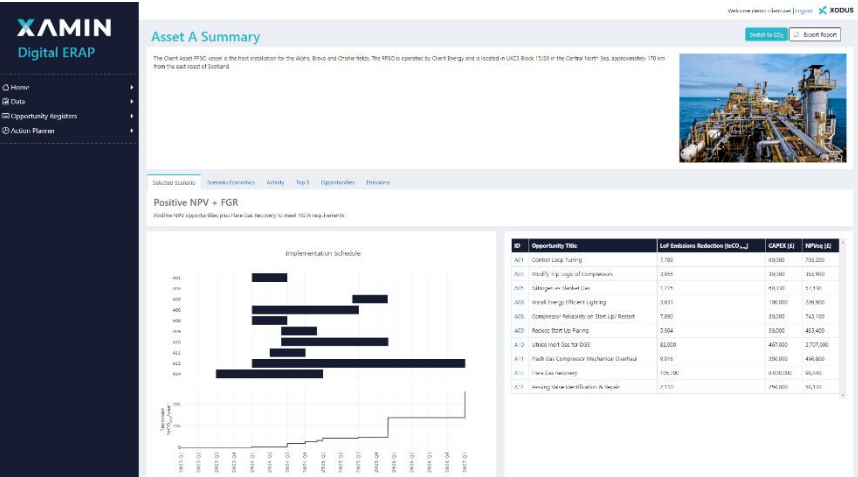

Accurate Scenario Analysis

Scenario analysis through grouping opportunities into comparable abatement scenarios, provides accurate emissions reduction forecasting by modelling how opportunities interact with each other, forming an actionable plan

Ranking & Tracking

This single source of EROs enables consistent ranking to aid selection using customisable ranking scales and tracking of EROs to show progress for ongoing evaluation and implementation

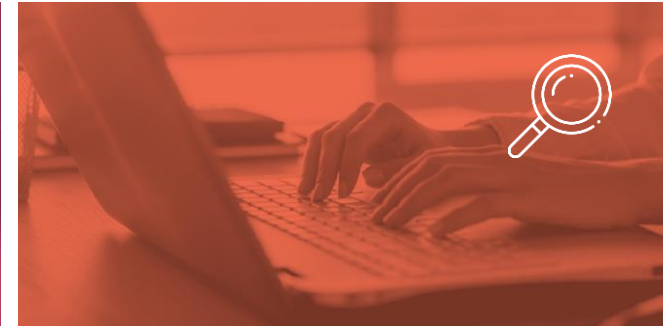

DIGITAL ERAP 2023 & 2024 THIS IS WHAT WE DO

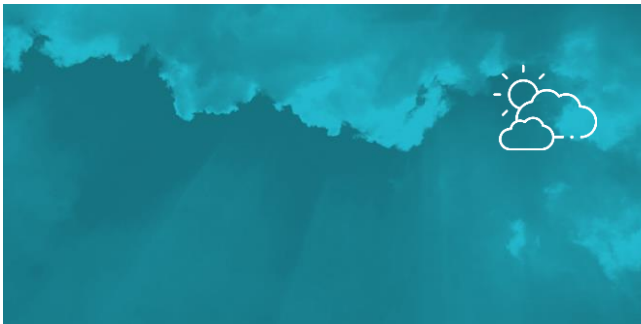

19

Number of assets (UK & Middle East) the Digital ERAP was utilised on

602

Emissions reduction opportunities processed by the Digital ERAP

267,000 teCO₂e

Average asset life of field emissions reductions for ERAPs produced

£16m & £11m

Average asset ERAP CAPEX & NPV

405km²

Submitted ERAP CO₂e savings equivalent to a forest bigger than Edinburgh & Glasgow combined
